> **Status labels used in this document:** VERIFIED (confirmed in the current source code or existing documents) · PROTOTYPE (works in the React/LocalStorage prototype with mock or simulated behaviour) · PROPOSED (recommended production design, not built) · PENDING CONFIRMATION (needs a client decision) · NOT IMPLEMENTED · NOT VERIFIED.

Purpose

Give every reader — client management, business users, developers, testers and operations — a single, accurate picture of what Bellomassi is, why it is needed, who uses it, what exists today and what is required for production.

Scope

The Bellomassi Order-to-Delivery Management Platform — the current React / LocalStorage prototype and the planned production system.

Definitions

Other terms: see **BM-GLO-001** (Project Glossary).

- 4. How users interact with the system
- 5. Modules
- 6. What the current prototype demonstrates — VERIFIED / PROTOTYPE
- 7. What is required for production — PROPOSED
- 8. Documentation map

1. What Bellomassi is

Bellomassi is an **order-to-delivery management platform** for a frozen and chilled food distributor. It replaces orders passed along by phone, email and WhatsApp with one digital record that flows from the salesman, through Sales Manager approval and credit control, Customer Service consolidation and zone-based dispatch, to the driver's doorstep handover, which the customer confirms with a one-time password (OTP). A delivery note is issued immediately.

The client Scope of Work (October 2026) defines three deliverables — the **Order Taking App**, the **Drivers App** and the **Admin Panel** — on one shared platform with one order record, workflow and approvals, live notifications, an OTP service, maps and routing, and an audit trail. Integration with **SAP** is planned as a second stage.

2. Why the platform is required

Today (SOW slide 2)	With Bellomassi
Orders arrive by call, email and WhatsApp and are re-typed	Captured once in a structured order
Approvals and credit checks are chased manually	Every order approved in the app with a credit check
Planning is manual; drivers learn their stops late	Zone-based planning; drivers see tomorrow's list today
Handover disputes ("what was delivered, when?")	OTP-confirmed, time-stamped handover with delivery note

Today (SOW slide 2)	With Bellomassi
No single status per order	One live status per order for every role

3. Who uses it

User group	Application	Main job
Salesman	Order Taking App	Capture and submit orders, correct returned orders
Sales Manager	Order Taking App	Approve value, quantity and credit
Customer Service	Order Taking App	Verify and consolidate approved orders, release to dispatch
Dispatcher	Order Taking App	Plan dispatches by zone, assign drivers and vehicles
Driver	Drivers App	Deliver in sequence, confirm handover with the customer's OTP
Finance	Notifications (SOW) / Invoices (prototype)	Credit exceptions; invoicing scope PENDING CONFIRMATION
Administrator / management	Admin Panel	Users, master data, rules, monitoring, reports
Customer	OTP and delivery note (SOW); customer app (prototype, PENDING CONFIRMATION)	Confirm handover; optionally order and track

The prototype additionally defines Super Admin, Warehouse Manager, Inventory Executive, QA Manager and Supplier roles (13 roles in total) — their production scope is PENDING CONFIRMATION.

4. How users interact with the system

- **Office users** work in a responsive web application with a role-specific sidebar and dashboard.
- **Drivers** use a mobile-first app (prototype: web at `/driver`; production: React Native app — PROPOSED).
- **Customers** receive the OTP and the delivery note; in the prototype they can also use a mobile-first customer app at `/customer`.
- Every hand-off is announced by in-app notifications; customer messages need an SMS or WhatsApp provider (PROPOSED).

5. Modules

35 functional modules were identified in the source code (full list: **BM-OVW-014** (Product Feature Catalogue)). Core SOW modules: authentication and roles, customer / product / zone master data, order capture, approval and credit, consolidation, dispatch and assignment, driver app, OTP and proof of delivery, delivery notes, notifications, dashboards and reports. Prototype extensions: inventory, scrap, warehouse and QA, VMS, documents and OCR, invoices, email, WhatsApp (OpenWA), automated notifications, call history, customer app, AI assistant, forecasting and replenishment.

6. What the current prototype demonstrates — VERIFIED / PROTOTYPE

Aspect	Fact (verified in source code, 12 Nov 2026)
Technology	React 19, Vite 8, Tailwind CSS 4, React Router 7, Recharts 3 — 391 source files, ≈46,500 lines
Data	Browser **LocalStorage** only (74 keys, ≈1 MB of seeded demo data, data version 8). No backend, no database.
Roles and access	13 roles, 110 permission keys, data scopes, 197 screens defined in one navigation configuration
Workflows	Complete order-to-delivery flow with approval, consolidation, dispatch confirmation (stock deduction), driver stop flow, OTP, proof of delivery, delivery notes, exception review
Simulations	DEMO GPS, OTP shown in app (no SMS), email / WhatsApp demo sending, mock OCR, rule-based AI, manual call log
Not implemented	Payments, credit notes, refunds, cold-chain sensors, batch / expiry stock tracking, order cancellation after submission, SAP integration

The prototype is suitable for **demonstration, requirement validation and UAT of business rules**. It is **not production software**: data lives in one browser, security is simulated and integrations are not live.

7. What is required for production — PROPOSED

1. Django REST Framework backend with PostgreSQL (**BM-ARC-001** (High-Level Design (HLD)), **BM-DAT-002** (Proposed Production Database Design)).
2. Server-side authentication and RBAC enforcing the same 110 permission keys (**BM-SEC-003** (Authentication, Password, MFA and Session Management Design)).
3. React Native driver app with background GPS; WebSocket tracking (**BM-RMP-003** (React Native Driver App and Customer App Roadmap)).
4. SMS / WhatsApp provider for OTP and delivery notes; email provider; Google Maps / Routes API (**BM-API-019** (Integration Specification (External Systems))).
5. Cloud or on-premises hosting with CI/CD, monitoring, backups and disaster recovery (**BM-INF-003** (Infrastructure, Network Architecture and Server Specification)).
6. SAP integration in stage 2 (**BM-RMP-004** (Integrations Roadmap — SAP, Email, WhatsApp (OpenWA), OCR, Maps and SMS)).
7. Client decisions on the open scope items (**BM-HND-012** (Pending Requirements Document)).

8. Documentation map

This document is part of a 25-folder documentation repository. Start with **BM-IDX-002** (Bellomassi Documentation Master) for the structure and **BM-IDX-001** (Bellomassi Documentation Index) for the full index.
